

Installing Nailon Ledge Trim

Nailon Brick or Stone ledge trim installs over the top course of panels.

Bending Ledge Trim

Nailon ledge trim can be heat-bent and installed around a corner. Before applying heat you must first cut out a v-notch from the ledge trim piece at the point where you plan on bending it. (Figure #11)

Because of the different shape of the Stone, unique notches must be made before the ledge trim can be heat-bent and installed on an outside corner. (Figure #12)
